

## ENVIRONMENT OREGON Your Summer Report

# Hope for our wild forests

*On Inauguration Day, President Joe Biden wasted no time in taking action, signing 17 executive orders. For those of us who care deeply about our wild forests, one piece in particular got us clapping. Public Lands Campaign Director Len Montgomery explains.*

President Biden directed the U.S. Department of Agriculture to immediately review restoring “roadless area” protections for our largest national forest: the vast, old-growth Tongass National Forest in southeast Alaska. It’s the world’s largest intact temperate rainforest, nicknamed “America’s Amazon” for its ancient trees and rich biodiversity.

What are “roadless area” protections? Twenty years ago, the Clinton administration finalized a key rule that protected wild areas in our national forests. Following public comments from 1.6 million Americans (many of which our national network’s advocates helped collect), the regulation, which protected still-wild areas of our national forests from “road construction, road reconstruction and timber harvesting,” safeguarded a whopping 58.5 million acres.

Known as the Roadless Rule, this important conservation tool has ensured that our wildest and most awe-inspiring spaces haven’t suffered from traffic, vehicle noise pollution, or water pollution from vehicle oil and grease. Beyond that, the Roadless Rule protects these acres from industrial timber harvesting, so our forests can grow naturally—allowing different-aged trees to grow near one another and undergrowth to thrive. The larger the roadless area, the more uninterrupted habitat there is for wildlife.

This is particularly important for species that need larger areas

*In 2000, our national network’s staff held an event as part of our campaign to secure protections for 58.5 million acres of roadless national forest land.*

to roam, such as wolverines and mountain lions. The Roadless Rule has also helped protect prime backcountry recreation land, much to the delight of hikers, climbers, fishing enthusiasts, snowshoers and cross-country skiers.

For people adjacent to these important areas, this protection is priceless. The U.S. Forest Service reported more than 149 million visits to national forests in their fiscal year 2019, and nearly half of all visitors came from within 50 miles of those public lands.

## Environment Oregon calls for renewed commitment to our state's plastic bag ban

The science is clear: Reusable bags aren't a threat to public health—and single-use plastic bags are still a threat to the health of our environment.

On Nov. 4, 2020, Environment Oregon State Director Celeste Meiffren-Swango joined state Rep. Janeen Sollman and Surfrider Foundation Oregon Policy Manager Char-

lie Plybon to call for the reinforcement of Oregon's Sustainable Shopping Initiative, which bans the sale of single-use plastic bags and requires a fee for recycled paper and reusable plastic bags. Enforcement of the ban eased in the COVID-19 pandemic, but health professionals have since deemed reusable bags as safe as single-use plastic bags.

“These Department of Energy rules set up tens of thousands of Americans to needlessly and unintentionally waste water and energy each time they hop in the shower or clean their clothes,” said Brynn Furey, energy conservation and efficiency associate with our national network.

Supporters of Environment Oregon and our network previously submitted more than 10,000 public comments opposing the showerhead rule.

## Broken infrastructure is polluting our water. A report shows how to fix that.

The way America does water infrastructure is harming the waters we use for drinking, swimming and fishing, and that we visit with family and friends.

With runoff from roads and parking lots—along with outflow from aging or failing sewage systems—polluting our nation's waterways and making us sick, our research partners at Environment America Research & Policy Center published a Dec. 2 report on how we can fix our outdated water infrastructure. It summarizes nearly two dozen case studies on projects that are successfully stopping pollution—from “conventional” upgrades to “green” infrastructure such as rain gardens.

“Investing in water infrastructure works,” said Laura Miller, co-author of the report and clean water advocate with our national network. “Across America, sewage overflows and runoff pollution are threatening our favorite places to swim, paddle and find peace in nature. But when our nation applies the right resources, we can fix these problems.”

From the Columbia River to Crater Lake, Environment Oregon is working to protect all of our waterways from pollution.

Environment Oregon State Director Celeste Meiffren-Swango (bottom row, first on right) advocated for stronger plastic policies before the Oregon Senate Committee on Energy and Environment in February.

lie Plybon to call for the reinforcement of Oregon's Sustainable Shopping Initiative, which bans the sale of single-use plastic bags and requires a fee for recycled paper and reusable plastic bags. Enforcement of the ban eased in the COVID-19 pandemic, but health professionals have since deemed reusable bags as safe as single-use plastic bags.

“The bag ban was passed because plastic waste is polluting our environment and Oregonians demanded action,” wrote Celeste Rep. Sollman and Plybon in *The Oregonian*. “We now know more about how COVID-19 spreads, and it's time for Oregon to recommit to the bag ban.”

“The sooner we can get back to reusable bags, the better—for our oceans, our beaches, our parks and the health of our environment.”

## Environment Oregon and our allies go to court to protect water- and energy-saving standards for appliances

To protect our climate and environment, we'll need to use less energy and less water. Showers and clothes washers and dryers use lots of both.

### Toward a greener future

Support our work to build a cleaner, greener, healthier future by including a gift to Environment Oregon or Environment Oregon Research & Policy Center in your will, trust or retirement accounts.

# Page 1 story continued: Hope for our wild forests

That means locals' full enjoyment of these natural spaces are, in part, dependent on this rule. Whether you're heading off with fishing poles, hiking gear or a backcountry permit, this regulation means you can truly and fully lose yourself in nature for a couple hours or a few days.

But the full application of the Roadless Rule was put into question in October 2020. The Trump administration finalized a decision that removed these protections from the Tongass National Forest, often called the "crown jewel" of the national forest system.

Now, President Biden has started the process of rectifying that ill-conceived decision. With the president's executive order, the Forest Service will review the previous administration's decision. Assuming that agency decides the rollback was a bad call, it will likely need to begin a new rulemaking process to reinstate the rule.

To avoid the yo-yo effect of one president rescinding and another reinstating protections for wild areas in our national forests, Congress must pass the Roadless Area Conservation Act. Doing so would upgrade the Roadless Rule from an agency regulation into an enshrined law. This would protect it from political winds and ensure that it, along with the Clean Air Act and Clean Water Act, serves as a staple of America's commitment to protecting our health and wild places.

The Roadless Rule has saved wildlife, preserved clean water sources, and provided the stage for thousands of hours of recreation and outdoor endeavors for the last 20 years. We must keep it that way for generations to come.

*By Ellen Montgomery, Director, Public Lands Campaign*

Staff

Thank you for supporting our work to take on the vast environmental challenges we face and to create a greener, healthier, more sustainable world. In these pages, you'll find the stories of the advocacy you made possible.

Your action and support allow us to keep working for a better world. Thank you.

Celeste Meiffren-Swango  
State Director

*In a video our national network released in February, former staff, canvassers and advocates talked about their work on our 2000 campaign to save the Tongass and millions more acres of national forest.*

## Your Summer Report

VOLUME 14 | NO. 1 | 2021

### Our mission:

We all want clean air, clean water and open spaces. But it takes independent research and tough-minded advocacy to win concrete results for our environment, especially when powerful interests stand in the way of environmental progress.

That's the idea behind Environment Oregon, Inc., a project of Environment America, Inc. We focus on protecting Oregon's air, water and open spaces. We speak out and take action at the local, state and national levels to improve the quality of our environment and our lives.

## Environment Oregon calls on Amazon to stop the sale of bee-killing pesticides

To save the bees, we're asking one of the world's biggest retailers to stop selling the pesticides that kill them.

In March, Environment Oregon, along with our national network, kicked off our campaign to call on Amazon to take neonicotinoid pesticides (or "neonics")—the substances most closely linked to a troubling decline in bee populations over the past two decades—off their (virtual)

shelves. Our ask is far from unprecedented: Home Depot and Lowe's have already pledged to phase out the use of neonics on their live plants, and Lowe's has committed to taking the pesticides off its shelves altogether.

"We need to reduce the use of this pesticide that's contributing to the collapse of our most important pollinators," said Malia Libby, Save the Bees campaign associate with our national partner, Environment America. "Amazon should join other retailers in doing the right thing and taking it off its shelves."

Our national network will be gathering petition signatures from thousands of people this summer calling on Amazon to act.
